## Anti staphylolysin antibody

## General:

In case of staphylococcus infections (e.g. wound infection), the organism reacts with formation of antibodies against the staphylococcus toxin staphylolysin. An increase of the anti-staphylolysin titer is observed approx. 2-3 weeks after infection.

Indication: Focus search, titer level control

Material: 1 ml serum TAT: 7-10 days\*

Method: PA

Units: IU/ml

Ref.- range: up to 2.0
