

Clobazam

General:

Clobazam is approved for adjunctive therapy in complex partial seizures and certain types of status epilepticus, specifically in myoclonic, myoclonic absence, simple partial, complex partial, and tonic varieties, and non-status absence seizures. It is also approved for treatment of anxiety.

Clobazam as with other benzodiazepine drugs can lead to physical dependence, addiction and benzodiazepine withdrawal syndrome. Withdrawal from clobazam or other benzodiazepines after regular use often leads to symptoms which are similar to those seen during alcohol and barbiturate withdrawal.

The following tests are available:

- **Clobazam in serum**

Material: 1 ml serum

TAT: 7-10 days*

Method: LCMS

Units: µg/l

Ref.- range: 100-400

- **Clobazam and metabolites**

Material: 1 ml serum

TAT: 7-10 days*

Method: LCMS

Units: µg/L

Ref.- range: see report
