

Felbamate

General:

Felbamate belongs to the new anticonvulsants and is not related to other anticonvulsants as its chemical structure is a propandiol dicarbamate. The absorption is fast and complete. The plasma half-life is about 20-23 hours. Overdosage can be lethal or life-threatening (aplastic anemia, toxic hepatopathy).

Indication: Monitoring of compliance and dosage

Material: 1 ml serum

TAT: 7-10 days*

Method: HPLC

Units: mg/l

Ref.- range: 30 - 80
