

Hyaluronic acid

General:

Hyaluronic acid is the main constituent of the joint fluid (synovia) and can be also found in substantial amounts in articular cartilage. Hyaluronic acid is a high-molecular substance. Hyaluronic acid is liquid and highly viscous. The viscosity can differ in different conditions. Hyaluronic acid is also used therapeutically in arthrosis of the knee joint and in plastic surgery.

Material: 1 ml serum

TAT: 7-10 days*

Method: EIA

Units: ng/mL

Ref.- range: <56.0
