## H. pylori Culture & Sensitivity Changed List of Antibiotics January 2018

These changes are in accordance with the most recent regulations and recommendations by the Association of the Scientific Medical Societies in Germany regarding Helicobacter pylori and gastroduodenal ulcerative diseases (Nr. 021 – 001), valid until 03.07.2020.

Starting in January the following antibiotics will be used for routine sensitivity testing of positive H. pylori cultures:

Amoxicillin  
Levofloxacin  
Clarithromycin  
Tetracycline  
Metronidazole

Moxifloxacin and Rifampicin can be done **only on request**. Please be sure to indicate this on the request form if required. Ciprofloxacin is no longer available.
