

# Acetylcholinesterase

The following tests are available:

- **Acetylcholinesterase in amniotic fluid**

Indication: Suspicion of open neural tube defect (NTD)

Material: 1 ml amniotic fluid

TAT: 7-10 days\*

Method: ELPH

Ref.- range: negative

Note: a positive proof of ACHE is not sufficient to diagnose neural tube defect (NTD)

- **Acetylcholinesterase in Blood**

Note: no longer available
