

# Enterovirus RNA

## General:

Enteroviruses are RNA-viruses and belong to picorna viruses. The most important enteroviruses in human diseases are: poliovirus 1-3, coxsackie A-Virus 1-24, coxsackie B-Virus 1-6 and ECHO-viruses with more than 30 serotypes. They cause different clinical pictures, from myocarditis, summer di-arrhea, up to exanthema or meningitis and paralytic poliomyelitis.
