

Fructosamine

General:

Fructosamine reflects the average blood sugar concentration of the past 1-3 weeks. The determination of fructosamine represents, apart from the HBA1c-determination, an additional method for retrospective control of the diabetic metabolism situation.

Material: 1 ml serum

TAT: 7-10 days*

Method: photometric

Units: $\mu\text{mol/l}$

Ref.- range: < 285
