

# Hemopexin

**Indication:** Assessment of the extent of intravasal hemolysis, if haptoglobin values have dropped to unmeasurable levels.

**Material:** 1 ml serum

**TAT:** 7-10 days\*

**Method:** RID

**Units:** mg/dl

**Ref.- range:** 50.0 - 115

**Note:** Newborns have a hemopexin concentration of about 20% of the adult value, the hemopexin concentration is not a criterion for the estimation of hemolysis in neonates.
